

## Coast Guard Sector Houston-Galveston Marine Safety Information Bulletin 08-17

### Tropical Depression Harvey Advisory

Sector Houston-Galveston is notifying all facilities, vessels, and port users that Tropical Depression Harvey is currently located approximately 150 miles west of Merida, Mexico, possibly tracking toward the Port of Freeport.

The port community is advised to monitor the progress of the storm as tropical storm force winds, heavy rainfall and storm surge are expected throughout the weekend. We encourage the port community to take prudent measures to ensure a high state of readiness, as track projections show potential significant impact to the Southeast Texas and surrounding areas. For information on Port Conditions, which will guide port stakeholder actions in the event of approaching storms, please refer to the Hurricane Information for the Marine Industry Guide at: [www.uscg.mil/d8/mso/hougal/portcondition/index.htm](http://www.uscg.mil/d8/mso/hougal/portcondition/index.htm). All vessels and facilities are encouraged to begin planning to take preventive measures in advance of the storm. Such measures may include the following:

- Safety measures should be taken to secure missile hazards, nonessential equipment and loose gear.
- Container stacking protocols should be reviewed and implemented accordingly to predicted sustained winds by the National Weather Service.
- Oil transfer terminals should be prepared to drain all loading arms and hoses of product, blank off hoses, and empty /clean small discharge containment prior to storm arrival.
- Ensure that vessel moorings are adequate for the predicted wind and surge. Mooring lines ready to be doubled up with due consideration given effects of predicted storm surge. Consider leaving port if moorings are not adequate.
- Sufficient number of officers and crew onboard to tend mooring lines or get underway.
- Vessel ballasted to ensure maximum safety.
- All side ports, hatches, portholes, and other openings are closed and secured.
- A continuous radio watch maintained on VHF-FM Channel 16 and associated vessel traffic frequencies.
- Ensure that anchor and anchoring equipment is in good working condition.
- Spare mooring lines/and or wires should be made readily available and inspected to ensure that they are in good working order.

As storm information is updated, there is the potential to go straight to Port Condition X-ray or Yankee this evening or Thursday morning. Additional guidance regarding Tropical Depression Harvey will be issued in the form of further Marine Safety Information Bulletins, Broadcast Notice to Mariners or other forms as necessary. Please contact the Sector Houston-Galveston Command Duty Officer at (281)464-4851 if you have any questions or comments.
